PROFESSIONAL SUMMARY

Software engineer with a deep passion for open-source development and scalable systems. Active contributor to major open-source projects including **Supabase**, **FOSSology**, and **Kubernetes**, focusing on core API reliability, secure self-hosted infrastructure, and distributed systems. Experienced in architecting production-grade platforms with Go, C, PHP, Docker, and TypeScript, and always looking to solve complex engineering challenges in the open.

EDUCATION

Vellore Institute of Technology Vellore, India
B.Tech in Information Technology *Jul. 2024 – May 2028 (Expected)*
Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming, Machine Learning, Cloud Computing

TECHNICAL SKILLS

Languages: TypeScript, PHP, C, Elixir, Go, SQL, Bash, JavaScript
Frameworks: React.js, Next.js, Node.js, Express.js, Tailwind CSS
Infra/Tools: Docker, Kubernetes, Linux, Nginx, Caddy, GitHub Actions, CI/CD
Databases/Other: PostgreSQL, Redis, Git, GitHub, Postman

WORK EXPERIENCE & OPEN SOURCE

OPEN SOURCE CONTRIBUTOR | SUPABASE INC. *8 Merged PRs, 9 Open PRs, 5 Issues*
• Secured self-hosted Realtime instances by moving hardcoded encryption keys to configurable `.env` variables, and added strict JWT audience/issuer validation in the Supabase Server.
• Proxied OAuth metadata endpoints (`.well-known` routes) to the API gateway in Caddy/Nginx configurations, resolving critical 404s for self-hosted deployments.
• Fixed cascading Docker Compose healthcheck failures by introducing proper grace intervals, and resolved multiple test flakes and log suppression bugs in Elixir-based Realtime backend.

OPEN SOURCE CONTRIBUTOR | FOSSOLOGY (LINUX FOUNDATION) *8 Merged PRs, 1 Open PR, 3 Issues*
• Eliminated N+1 queries, redundant DB lookups, and null-crashes in the `/scanned` API endpoint. Updated member API endpoints to adhere to proper REST conventions.
• Fixed severe SQL formatting bugs and type misuses in the DAO layer, backing fixes with comprehensive PHPUnit test coverage.
• Resolved critical memory bugs in the C-based `pkgagent`, including unsafe `strcpy()` usage, NULL-before-free crashes, and string-length tracking bugs.

SOFTWARE DEVELOPER INTERN | LOCARA LABS *Aug. 2026 – Present*
• Building production web and mobile applications for large-scale egocentric video datasets that power the next generation of robotics and embodied AI systems.
• Developing full-stack features and infrastructure across a modern stack including Next.js, React Native, Supabase, and Cloudflare.
• Building and supporting robust data pipelines and quality-assurance tooling to streamline high-throughput video dataset workflows for field teams and clients.

SOFTWARE ENGINEER INTERN | TENSE AI *Dec. 2025 – Jun. 2026*
• Architected scalable RESTful APIs and microservices using Node.js and Express, ensuring high performance and security for enterprise-grade applications.
• Built production-facing platform features across backend services, workflow automation, and AI-assisted product surfaces.
• Improved system scalability with queue-driven workflows and tighter coordination across product and engineering teams.

PROJECTS

Resync: UPI Autopay Recovery Platform | [LINK](#) *2026*
• Architected a **9-microservice** payment recovery platform in **Go** + **gRPC** with smart dunning engine that classifies UPI failure codes and schedules context-aware retries.
• Orchestrated event-driven pipeline using **Kafka** (partition-keyed ordering), **Redis** distributed locks, and idempotency keys ensuring **zero double-charges**.

Continuum: AI/ML Workflow Automation Platform | [LINK](#) *2026*
• Deployed a containerized microservices architecture using Docker and Kubernetes for high availability.
• Established robust CI/CD pipelines for automated testing, building, and deployment, ensuring reliable releases.
• Automated Gmail drafting system
